

Keep your generator O.A.D.* so you don't become D.O.A.*

***Outside, Away & Dry** ***Dead On Arrival**

Generators quickly produce high Carbon Monoxide (CO) levels that may cause death. You can't see or smell CO.

- **NEVER** use a generator indoors or in partially enclosed spaces like garages
- **OPENING** doors and windows or using fans **WILL NOT** prevent CO poisoning
- **LOCATE** generators outdoors, away from doors, windows, vents that attach to the side of your house, and air conditioning units that could pull the CO indoors
- **USE** battery-operated CO alarms in your home that have met the latest safety standards
- **FOLLOW** the manufacturer's instructions for generators and CO alarms
- **TEST** CO alarms frequently
- **GET** fresh air **IMMEDIATELY** if you feel sick, dizzy or weak and call your Poison Control Center 1-800-222-1222.
